Point Lepreau Generating Station Refurbishment Project Update

Fredericton, N.B. – Project staff are proceeding with the removal of all 380 calandria tubes. We do not have specific details from AECL on how it will impact the overall timeline of the project. In our continued efforts to be open and transparent with our employees and customers, we are releasing this information to you now as this is currently happening and will provide you with more detailed information as it becomes available later next week.
