

Énergie NB Power

NERC Compliance

NB Power is responsible to comply with the North American Electric Reliability Corporation (NERC) reliability standards.

NERC is an international, independent, self-regulatory, not-for-profit organization, whose mission is to improve the reliability and security of the bulk power system in the United States, Canada and part of Mexico. NERC's formation and current role were guided by the introduction of an open access system in the United States, as well as several significant blackouts which led to the recommendation that the most effective way to prevent future blackouts and reduce their scope was for governments to make reliability standards mandatory and enforceable in the United States

In Canada, the responsibility for the reliability of bulk power systems resides with the individual provinces. New Brunswick regulates the reliability of the bulk power systems under the Electricity Act which gives the New Brunswick System Operator (NBSO) the authority to set and enforce reliability standards under the Market Rules, subject to oversight by the Energy and Utilities Board.

As part of its NERC Compliance Program, NB Power Transmission has developed a Facility Connection Guide consistent with the requirements of reliability standard FAC-001 which identifies the processes and general technical requirements for connecting to the New Brunswick Power transmission system. Anyone wishing to obtain a copy of the Facility Connection Guide or wishing to obtain additional information on the NERC Compliance Program, contact:
