

The warning signs are there,
if you look for them.

Énergie NB Power

**Every year, people
get hurt or killed by
electricity because
they don't see the
warning signs.**

- Before you trim that tree, look around and ask yourself, "What's beside me, above me and below me?"
- If any part of the tree is touching – or can touch – a power line, electricity could travel through the tree and into your body.

Be safe. Look. Then look again.
When in doubt, **call us.**

**Look out
for the Lines.**
