

Total estimated dose due to emissions at Point Lepreau Generating Station

Énergie NB Power

Comparison

Natural background radiation: 2,000-5,000 µSv per year

Legal limit for dose from emissions: 1,000 µSv per year (CNSC)

Single chest X-ray: approximately 70 µSv

Total radiation dose due to emissions from Point Lepreau Generating Station since 1984: 34.56 µSv

YEAR	LIQUID	AIRBORNE	TOTAL
1988	0.02	0.72	0.74
1989	0.07	0.70	0.77
1990	0.16	0.83	0.99
